

NEW

8-flute End Mill for Vertical Wall/Bottom Face Finishing

ER8WB-ATH (Radius type)
ES8WB-ATH (Square type)

MOLDINO Tool Engineering, Ltd.

New Product News | No. H2204A-1 | 2022-01

The Pinnacle of Finish Milling Vertical Walls and Bottom Faces. Vertical walls and bottom face finishing all with a single tool!

ER8WB-ATH/ES8WB-ATH features

01

Peripheral cutting edge design tailored for vertical wall milling. Allows milling as intended with minimal deflection, reducing re-machining and re-working steps.

02

Incorporates MOLDINO's own corner radius edges to achieve high-quality bottom face milling.

ER8WB-ATH : $\phi 6 \sim \phi 12$ [19 Items]
(Corner radius R1)

ES8WB-ATH : $\phi 6 \sim \phi 12$ [19 Items]
(Square)

1 Using long-fluted end mill for cutting vertical walls on mold parts reduces accuracy and generates time-consuming re-machining and reworking.

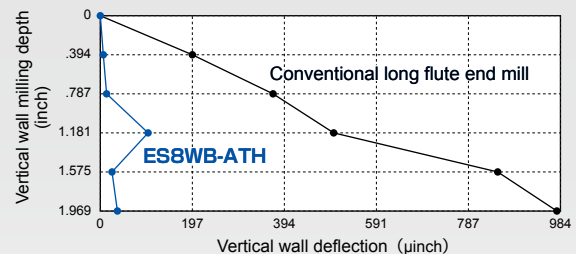

2 Reducing pick feed when contour milling achieves machining accuracy for vertical walls but increases machining time.

Using the ER(S)8WB-ATH will reduce the need for re-machining, allowing for unattended machining processes.

The ER(S)8WB-ATH allows contour milling with larger pick feed.

Work material : STAVAX (52HRC) Machine : Vertical MC Coolant : Air blow Projection : 1.181 inch(L/D=5)

[Conventional long-flute end mill]

Tool specifications : DC .472 inch · Flute length 2.165 inch · 6Flutes
 $n=530\text{min}^{-1}(v_c=66\text{ SFM})$ $v_f=3.7\text{ IPM}(f_z=.001\text{ IPT})$
 $a_p=1.969\text{ inch}$ $a_e=.002\text{ inch}$

[ES8WB-ATH]

Tool specifications : ES8WB1200LN-60-ATH (DC .472 inch · Flute length .472 inch · 8Flutes)
 $n=1,326\text{min}^{-1}(v_c=164\text{ SFM})$ $v_f=25.0\text{ IPM}(f_z=.002\text{ IPT})$
 $a_p=.236\text{ inch}$ $a_e=.002\text{ inch}$

Vertical wall finishing using ER(S)8WB-ATH

Solution

- Short flute gives high rigidity => **Minimizes deflection**
- Tool design with few contact points => **Minimizes vibration**

Vertical wall finishing with conventional long-flute end mill

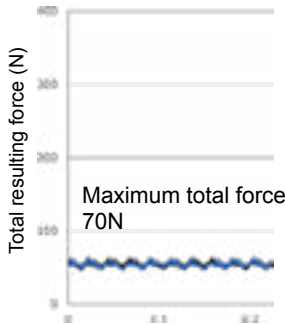

Task

- Extended projection length (flute length) => **Deflection**
- Multiple contact points => **Increased vibration**

Comparison of cutting force

Work material : H13(48HRC) Machine : Vertical MC(BT40) Coolant : Air blow Projection : 30mm(L/D=5)

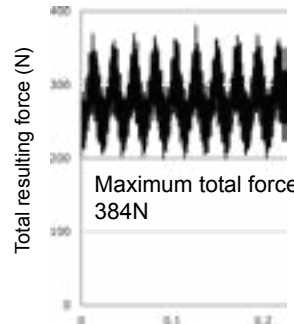

ER(S)8WB-ATH

Tool : ES8WB0600LN-30-AT
(DC .236 inch,
Flute length .236 inch,
Under neck length 1.181 inch)
Cutting conditions : $n=2650\text{min}^{-1}$
(v_c 164 SFM)
 $v_f=25.0$ IPM
(f_z .001 IPT)
 a_p .118 inch
 a_e .004 inch

Reduced cutting force and vibration

Conventional long flute end mill

Tool : 6flutes long flute
(DC .236 inch,
Flute length .984 inch)
Cutting conditions : $n=2650\text{min}^{-1}$
(v_c 164 SFM)
 $v_f=18.8$ IPM
(f_z .001 IPT)
 a_p .984 inch
 a_e .004 inch

Large cutting force, resulting in vibration

This is the Point

The unique design reducing cutting force and vibration allows milling as intended with minimal deflection.

Shiny appearance with uniform cutter marks

Milled surface appears cloudy. Uneven cutter marks

Smooth interface between bottom and radius cutting edges insures high-quality bottom face milling.

Work material : Carbon Steel Machine : Vertical MC(BT40)
Coolant : Air blow Projection : 2.362 inch(L/D=5)
Tool : Conventional 4flutes radius end mill,
ER8WB1200LN-60-R1.0-ATH(DC .472 inch)
Cutting conditions : $n=5310\text{min}^{-1}$ (v_c 656 SFM) $f_z=.002$ IPT
 a_p .002 inch, a_e .236 inch

- [Note]**
- ① Use the appropriate coolant for the work material and machining shape.
 - ② Use a highly rigid and accurate machine as possible.
 - ③ These Recommended Cutting Conditions indicate only the rule of a thumb for the cutting conditions. In actual machining, the condition should be adjusted according to the machining shape, purpose and the machine type.
 - ④ If the rpm available is lower than that recommended please reduce the feed rate to the same ratio.

Recommended Cutting Conditions (Inch)

Bottom face finishing

※ A radius type (ER8WB-ATH) should be used for bottom face finishing.

* Cutting conditions for the long-shank type ($\varnothing 7/9/11$) are for a tool projection of 5D (tool diameter \times 5). Modify the conditions using the following correction factors if the projection amount changes.

Cutting condition correction factors for long-shank type (%)

Work material			Carbon steel Alloy steel (180~250HB)		Tool steel (25~35HRC)		Pre-hardened steel (35~45HRC)		Hardened steel (45~55HRC)		Hardened steel (55~62HRC)	
Projection	a_p (mm)	a_e (mm)	Revolution n (min ⁻¹)	Feed rate v_f (mm/min)	Revolution n (min ⁻¹)	Feed rate v_f (mm/min)	Revolution n (min ⁻¹)	Feed rate v_f (mm/min)	Revolution n (min ⁻¹)	Feed rate v_f (mm/min)	Revolution n (min ⁻¹)	Feed rate v_f (mm/min)
5D	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
6D	100%	100%	70%	60%	70%	60%	70%	60%	70%	60%	70%	60%
7D	100%	100%	70%	50%	70%	50%	70%	50%	70%	50%	70%	50%

- [Note]**
- ① Use the appropriate coolant for the work material and machining shape.
 - ② Use a highly rigid and accurate machine as possible.
 - ③ These Recommended Cutting Conditions indicate only the rule of a thumb for the cutting conditions. In actual machining, the condition should be adjusted according to the machining shape, purpose and the machine type.
 - ④ If the rpm available is lower than that recommended please reduce the feed rate to the same ratio.

Recommended Cutting Conditions (Metric)

Bottom face finishing

※ A radius type (ER8WB-ATH) should be used for bottom face finishing.

Work material			Carbon steel Alloy steel (180~250HB)		Tool steel (25~35HRC)		Pre-hardened steel (35~45HRC)		Hardened steel (45~55HRC)		Hardened steel (55~62HRC)

[Note]

- ① Use the appropriate coolant for the work material and machining shape.
- ② Use a highly rigid and accurate machine as possible.
- ③ These Recommended Cutting Conditions indicate only the rule of a thumb for the cutting conditions. In actual machining, the condition should be adjusted according to the machining shape, purpose and the machine type.
- ④ If the rpm available is lower than that recommended please reduce the feed rate to the same ratio.
- ⑤ For slotting, adjust the feed rate to 50% as general criteria.
- ⑥ For ramping, adjust the ramp angle to 0.5° or less and the feed rate to 50% as general criteria.

The ER8WB-ATH achieves high-quality bottom face milling.

This is the Point

Use with a small pick feed and high cutting speed milling allows for a high mirror finish

ER8WB-ATH

MOLDINO logo reflected in machined surface

Work material : STAVAX(52HRC)
 Machine : Vertical MC(HSK-E32)
 Coolant : Water base coolant
 Projection : .787 inch(L/D=3)
 Tool : ER8WB0600LN-20-R1.0-ATH (DC .236 inch)
 Cutting conditions : $n=40,000\text{min}^{-1}$ ($v_c=2,470$ SFM)
 $v_f=126.0$ IPM ($f_z=.0004$ IPT)
 $a_p=.0006$ inch $a_e=.0008$ inch Wet
 Reciprocating machining of scanning line 2-hour machining time

Work size : 3.150 \times 2.756 inch

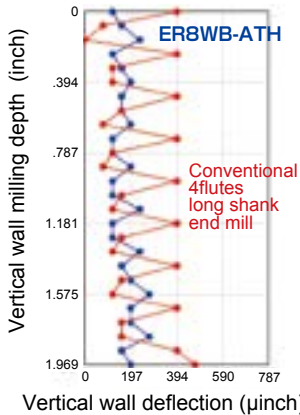

Surface roughness in pick direction Ra : .591 μ inch, Rz : 2.717 μ inch

Field data

Diecast mold core vertical wall finishing

Work material : H13(45HRC) Machine : Vertical MC (HSK-A63) Coolant : Air blow Projection : 2.559 inch(L/D=5)
 Tool : ER8WB1200LN-60-R1.0-ATH($\phi 12$) Conventional 4flutes long shank end mill

Cutting conditions : ER8WB-ATH $n=1,326\text{min}^{-1}(vc=164\text{ SFM})$ $vf=25.0\text{ IPM}(fz=.002\text{ IPT})$ $ap=.236\text{ inch}$ $ae=.004\text{ inch}$
 Conventional 4flutes long shank end mill $n=1,326\text{min}^{-1}(vc=164\text{ SFM})$ $vf=12.5\text{ IPM}(fz=.002\text{ IPT})$ $ap=.236\text{ inch}$ $ae=.004\text{ inch}$

Milled surface with minimal unevenness and shine

Cloudy and uneven milled surface with conventional tools

ER8WB-ATH produces good machining accuracy and surface finish that increases efficiency compared to conventional tools.

Example for plastic molds and bushing hole finishing

Work material : STAVAX(52HRC) Machine : Vertical MC (BT40) Coolant : Oil base coolant Projection : 1.969 inch(L/D=5)
 Tool : ES8WB1000LN-50-ATH($\phi 10$) Conventional long flute end mill Hole dia. : 1.654 inch Depth : 1.457 inch

Cutting conditions : ES8WB-ATH $n=1,592\text{min}^{-1}(vc=164\text{ SFM})$ $vf=12.5\text{ IPM}(fz=.001\text{ IPT})$ $ap=.197\text{ inch}$ $ae=.002\text{ inch}$
 Conventional 6flutes long flute end mill $n=600\text{min}^{-1}(vc=62\text{ SFM})$ $vf=3.2\text{ IPM}(fz=.001\text{ IPT})$ $ap=.787\text{ inch}$ $ae=.002\text{ inch}$

* Machined using finishing machining with nominal diameter for both tools

[Comparison of finishing time]

ES8WB-ATH

- Long-flute end mill requires total of 6 zero cuts and corrections for deflection and dimensional adjustment.
- ES8WB-ATH achieves deflection of less than 118.11 μinch , even **without zero cutting**. Completed with just one final dimensional adjustment.

Surface roughness in pick direction Ra : 8.50 μinch , Rz : 36.38 μinch
